

Tokens

PART OF OUR MERCHANTSUITE
COLLECTION OF SOLUTIONS

Credit card data securely converted, stored and used for automatic debits and single-click payments.

Removes credit card details entirely from your environment

Improves cashflow with automatic debits, one-click payments and digital wallets

Relieves customers from having to provide card details repeatedly

Simplifying your security requirements

Capturing, transmitting and storing actual card details, puts your business at risk and within scope of the Payment Card Industry Data Security Standard (PCI DSS) compliance requirements. Linkly help you by securely capturing customer card details and 'tokenising' them (converting them into tokens) within our PCI DSS Level 1 compliant environment. The tokens produced are encrypted and can only be used inside Linkly online services, making them useless to cyber thieves.

Token management

You can give tokens up to three reference details and store the customer's information, such as name, address, phone, email and date of birth. This makes for quick and easy searching and editing, when needed.

Automatic debits

Once a card number has been tokenised, you can store and use the token to charge customers automatically for recurring payments; such as subscriptions, service bills and membership fees. You can also do auto top-ups for transportation cards upon reaching minimum balance.

Various options for tokenisation

If you already have card data on hand, you can tokenise them manually or by batch upload. You can then remove the existing card data from your business environment.

You can also send customers a Payment Request with a tokenising function via SMS or email. Contact Centres using our Secure Call Interface solution can also tokenise card numbers while payments are being made securely, over the phone.

Customers can tokenise their cards by entering them on a secure registration page or digital form. They can also click 'Remember this Card' when making a payment on a hosted payment page.

Single-click payments

Our API allows you to build tokenisation seamlessly into your website. Customer card details can be tokenised automatically when a payment is made or a new card is registered. Multiple cards can be tokenised and organised in a digital wallet so customers simply need to click on a card to make a payment. The corresponding token will then be used to process the transaction.

Start using Tokens in 3 simple steps:

1.

Go to our Sign Up page linkly.com.au/signup and choose between '30 Day Free Trial' or 'Purchase a Package'.

2.

Select either the Gold or Platinum packages, which both include Tokens.

3.

Once you've signed up, log in to linkly.com.au/login with your registered email address and password, go to MySuite and select Tokens to start creating and managing your Tokens. Tokenisation will also be enabled for customers when they submit their credit card details.
