

Release notes

On premise software release

Version 5.6.8

9 August 2022

- We made some tweaks to better support pre-authorisation transactions.
- We've added extra security to the way we handle a merchant's Linkly EFT-Server credentials.
- We added a short delay to the launch of the Linkly EFT-Server on computer start up, to allow the computer to be ready to handle the extra security measures. The extra time to launch the EFT-Server is typically two minutes after computer start up is completed (per Windows default for a delayed application start up).
- Zeller terminals are now supported, with new installer just for Zeller terminals.
- To access our new features and improvements, please install the latest software version [from our website](#).
